# Use Case: Basic Incident Reporting

Ensuring a safe environment can be simple. With Qualtrics you can report, track, escalate, and resolve incidents. Qualtrics can be used for automating communications to response teams, organizing data for company records, making changes, and tracking impact.

Incident occurs and Reporter is made aware

Reporter takes immediately required actions

Reporter initiates survey and records vital information

Information stored for reference and potential legal proceedings

Ticket created

Ticket is assigned optimal team member

Escalations to other personnel if necessary

Post-Incident actions taken, including repairs

Resolutions and report data tracked on a dashboard
